2018-2020 DRS Call

Advancing innovation in the society at large, and among first responders, to reduce the loss of human life and to reduce environmental, economic and material damage from natural and man-made disasters, including from climate-related weather events, earthquakes and volcanic events, space weather events, industrial disasters, crime and terrorism threats.

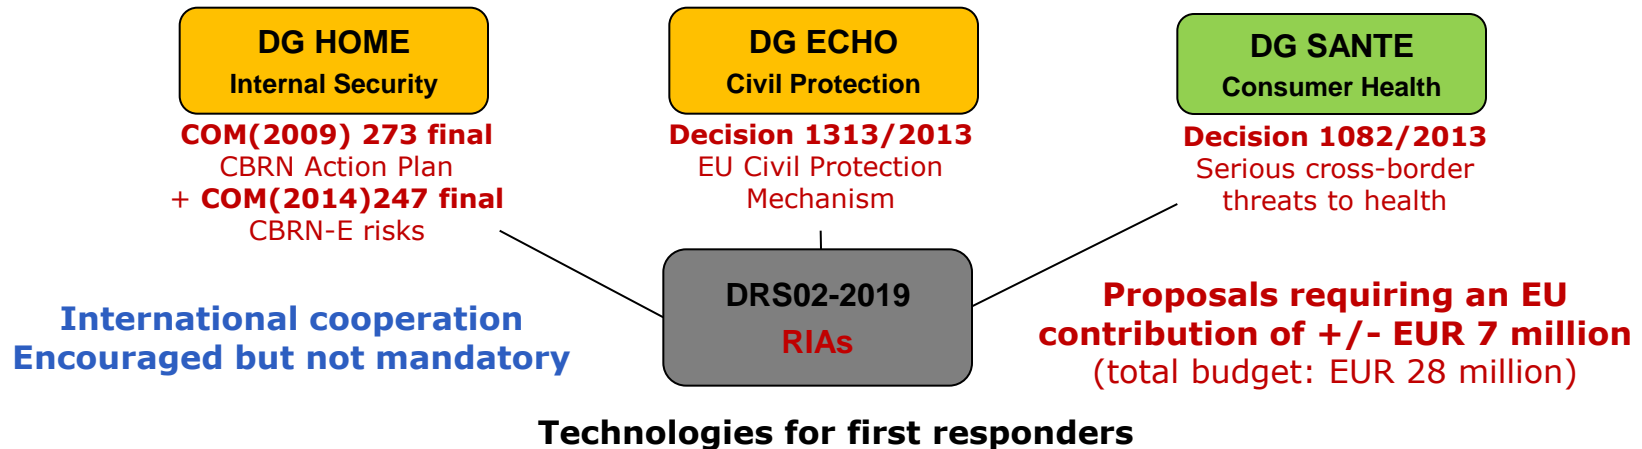

- **SU DRS01-2018-2019-2020**: Human factors, and social and societal, and organisational aspects for disaster-resilient societies
- **SU-DRS02-2018-2019-2020**: Technologies for first responders
- **SU-DRS03-2018-2019-2020**: Pre-normative research and demonstration for disaster resilient societies
- **SU-DRS04-2019-2020**: Chemical, biological, radiological and nuclear (CBRN) cluster
- **SU-DRS05-2019**: Demonstration of novel concepts for the management of pandemic crises

Human factors, and social, societal, and organisational aspects for disaster-resilient societies

- Research and innovation in support of improved preparedness and risk awareness related to natural or man-made disasters from a societal viewpoint in view of creating a resilient society in Europe
- Research to assess social media and other crowd-sources data in emergency situations for different disaster scenarios (positive and negative impacts)
- Research encompassing the whole **risk management** cycle (from prevention and preparedness, communication, to response and recovery) with focus on risk awareness and response

Addressing diversity in **risk perception**, vulnerabilities, understanding, better transfer of research outputs to meet citizen expectations regarding risk acceptance and awareness.... **Multidisciplinary teams** with CSOs, first responders, (national, regional, local, city) authorities and involving citizens representative of **European diversity** for different types of disasters : development of a culture of improved preparedness, adaptability and resilience to risks, including the use of social-media and crowd-sourced data, and the **involvement of citizens** in the investigations and possible **validation of tools and methods**.

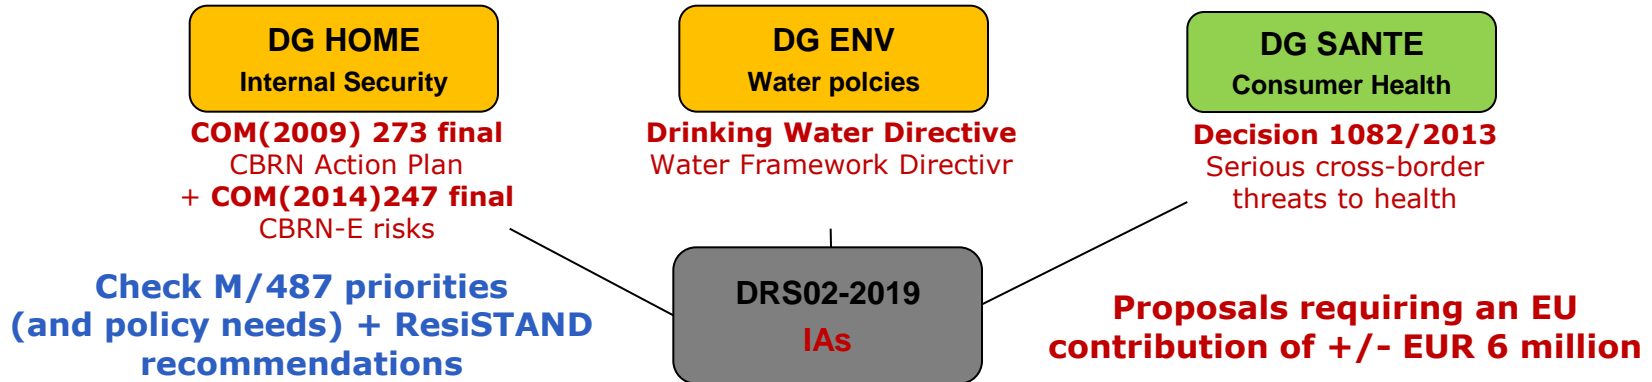

Novel solutions improving the protection of first responders against multiple and unexpected dangers, or enhancing their capacities by addressing related research and innovation, in particular in 2018:

➤ **Sub-topic 2 – Innovation for rapid and accurate pathogens detection:** novel technologies required by first responders for rapidly detecting pathogens, as well as tools for joint epidemiological and criminal risk and threat assessment and investigation.

➤ **Open Sub-topic:** other technologies for use by first responders (involving a large number of organisations) on e.g. communicating and smart wearables, light-weight energy sources, situational awareness using UVA and robots etc. (see text of call), the list is not exclusive. Requirement for testing and validation of technologies / methodologies not only in labs but also in training installations and in-situ deployment. Interdisciplinary teams to be involved. Participation of first responders in a systematic manner and new methods on how to involve them and organise their interactions with researchers.

TRL 4 to 6

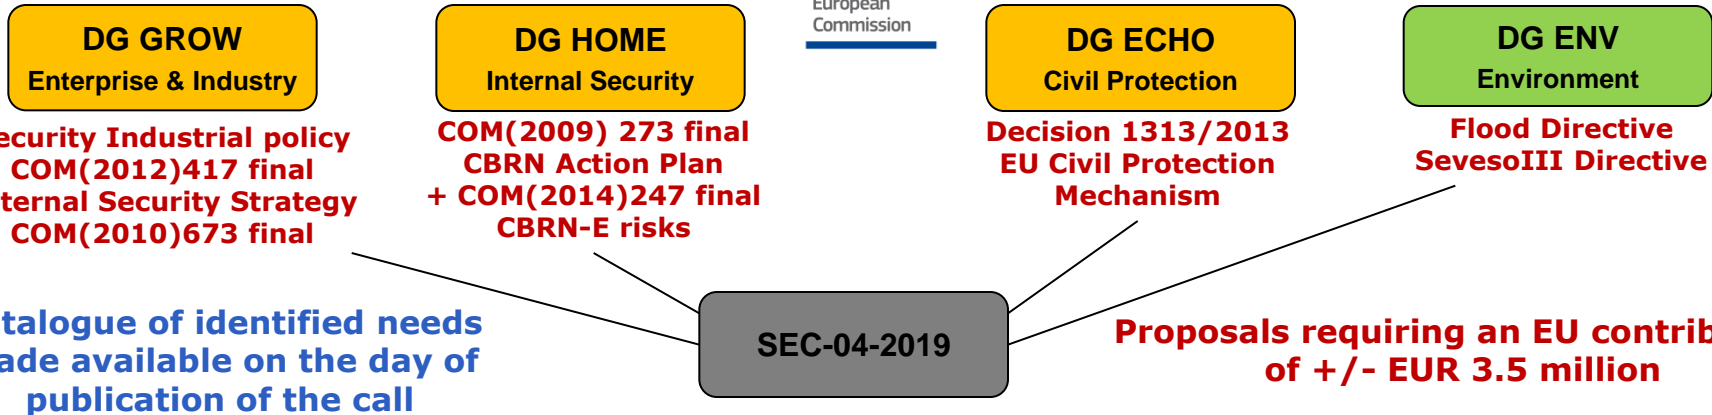

Pre-normative research and demonstration for disaster-resilient societies

Insufficient harmonisation and standardisation hampers interoperability of equipment and procedures implemented by first responders, also leading to market fragmentation. Pre-normative research may address this issue effectively. In 2018, focus will be on:

➤ **Sub-topic 2 – Pre-standardisation in crisis management (including natural hazard and CBRN-E emergencies)**: development of standards for civil protection in the areas of crisis management (including for systems, tools and services related to natural hazards and CBRN-E emergencies) to increase interoperability of equipment and procedures. IAs to bring validated and positively assessed practices into standards within or outside current standardisation processes. Participation of SOs required. Complementarity with EDA-supported activities in the CBRN-E area.

Expected impact: standards for interoperable equipment and procedures in support to operations involving international crews.

Chemical, biological, radiological and nuclear (CBRN) cluster

Technologies and innovations in the field of CBRN developed by companies which often face difficulties in bringing them to markets.

List of technologies added to ENCIRCLE platform

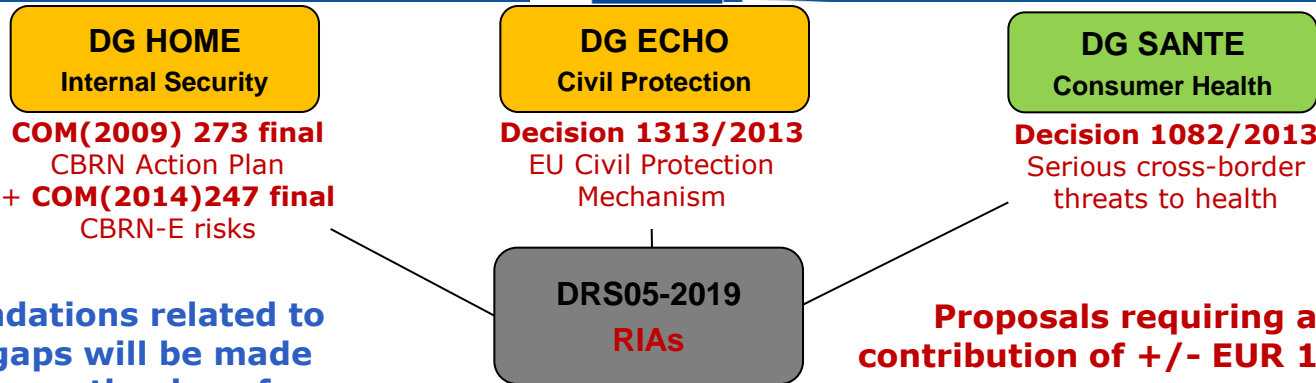

2019 call opened to RIAs led by SMEs building up an agreement with ENCIRCLE for support to the exploitation of research outputs and integration in the platform.

Where applicable, complementarity to be demonstrated with activities supported by EDA

ENCIRCLE

European Cbrn Innovation for the market CLuSTER

Recommendations related to research gaps will be made available on the day of publication of the call

Proposals requiring an EU contribution of +/- EUR 10 million

Demonstration of novel concepts for the management of pandemic crises

- Large-scale pandemics need to be addressed internationally, with a large number of practitioners and stakeholders, from planners of national health systems to first responders.
- Exploratory phase (2014) addressing the feasibility of strengthening capacity-building for health and security protection issued a number of recommendations related to research gaps and proposed innovative concepts to better integrates existing tools and systems (to be made publicly available on the portal of the call)
- Demonstrations required to assess these novel concepts in support of cross-border emergency approaches, to strengthen preparedness and response to pandemics

Expected impacts: Novel concepts for health and security protection in case of large-scale pandemics validated by international organisations and a large number of EU Member States (with a commitment to share the concepts), prototype IT system integrating innovative tools and supporting existing emergency frameworks, and operational strategy for implementation of the concepts.

**Best wishes
and thank you
for your attention!**
