

## European Machine Vision Forum 2020

*Focal topic:*

### Accuracy, Reliability and Limits of Machine Vision

The **European Machine Vision Forum** is an annual event of the European Machine Vision Association - EMVA. The aim is to foster interaction between the machine vision industry and academic research to learn from each other, discuss the newest research results as well as problems from applications, learn about emerging application fields, and to discuss research cooperation between industry and academic institutes.

Many conferences target either academic researchers or applied industrial developers. However, on the European level, there is no other forum where research and industry can meet and network.

Thus, EMVA's **European Machine Vision Forum** taking place every year at a different location in line with the selected focal topic of the respective forum fills an important gap. The forum offering conference style presentations and a table-top exhibition is directed to scientists, development engineers, software and hardware engineers, and programmers both from research and industry.

### DON'T MISS THE EXCLUSIVE OPPORTUNITY TO BUILD RECOGNITION AND AWARENESS
