Maritime
industry

Life Science
industry

ICT and future
technologies

Bio- and
circular
economy
and
cleantech

Experience
industry
(movies,
games,
tourism)

MaritimeTurku - growth from the sea

Southwest Finland is home to a large, internationally significant and growing ecosystem of manufacturing maritime industry. The purchasing network of the ecosystem that uses state-of the-art telecommunications technology also sports world class efficiency.

HealthTurku – excellence in health

The Turku region forms the strongest life science cluster in Finland where long-term high-quality research is combined with diverse business operations as well as expertise in commercialisation and internationalisation.

Growth prospects in the manufacturing technology industry

- there are many jobs available in Southwest Finland at present and in the next few years. The demand for highly educated experts will double, and hundreds of new skilled professionals will be needed.
- case Sandvik: The employment impact of the Turku office was about 2,000 people in 2017, with an annual increase of about 500 people
- in 2018 established Battery Electrification Innovation and Development Center for loaders and trucks in Turku
- Valmet Automotive hired more than 3,000 employees in 2014–2018 totalling now almost 5000. Opens in late 2019 a new battery production center, 300 new employees.

Clean solutions for global markets

- CleanTurku companies utilise and develop technologies, processes, services and products that minimize the environmental load
- the Chemical industry turnover in Southwest Finland is 2.5 billion euros (excluding pharmaceutical industry)
- the Chemical industry covers 1/4 of the total turnover of all industry in Southwest Finland
- over 100 innovative companies that utilize or develop technologies, processes, services or products that prevents or minimizes the environmental load.
