# OUR VISION OUR MISSION

## **Our Vision**

A responsible society for healthy oceans!

## **Our Mission**

To clean rivers and protect the sea from plastic waste through technological innovation and ecological inspiration towards a sustainable future!

e v e r w a v e

# WHAT WE ARE WORKING ON

## TECHNOLOGICAL INNOVATION

The focus is on a combination of active and passive cleanup technologies for rivers that prevent waste from entering the oceans. Due to their functional architecture, the stationary platform systems continuously take up and store waste drifting with the current. The flexible and AI-supported garbage collection boats are able to clean up waste hotspots in the larger environment - even in places that are difficult to access. The waste is then recycled by mechanical, thermochemical and biotechnological processes to new products.

## ECOLOGICAL INSPIRATION

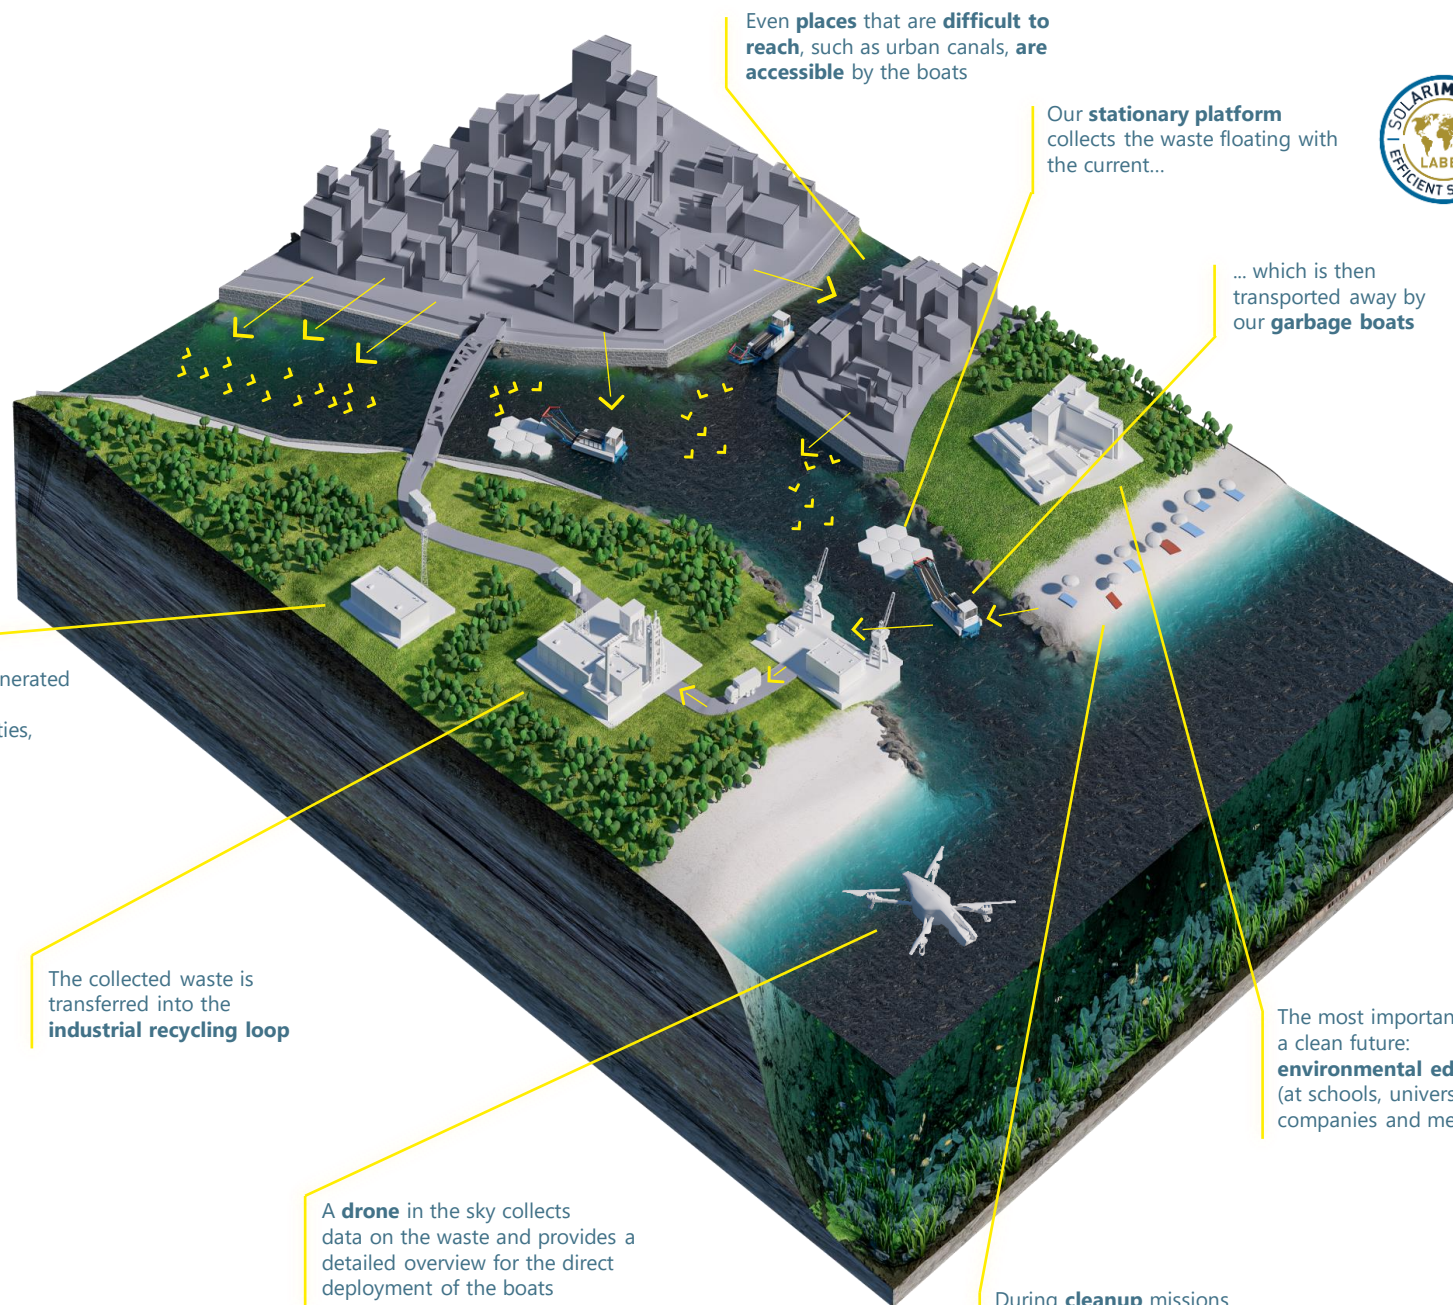

Raising public awareness for the global plastics crisis and promoting solutions through environmental education are crucial for a healthy environment. This includes interactive events and creative PR activities with international reach, as well as online presence, interviews and media coverage - in news portals and on television - as well as presentations, information stands and special events.
