PROBLEM

CyberCrin

Based on interviews we have done with companies we noticed that:

Low awareness of cybersecurity risks from the owner of the company.

Source. Accenture

Unknowledge

of the implementation of cybersecurity solutions to protect companies.

Source. PWC

As a result, companies have completely **Vulnerabilities** of systems IT

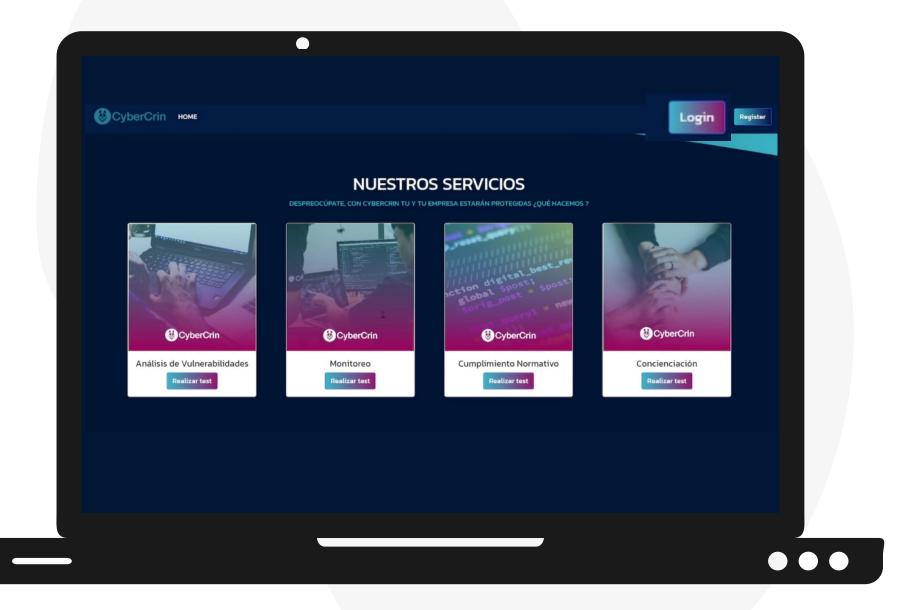

We build a **cybersecurity** fort

Reduce risks of cyberattacks
Throught the managament of
vulnerabilities.

Encourage your IT system With recommendations for preventive and corrective actions.

Protection from cyberattacks
Real time monitoring and
sending alerts.

Login & 4 modules

Our solution is hosted on our website, our customers will have a username and password to access our page.

After loging, our customers will be able to choose one of the 4 modules to manage cyber vulnerabilities.

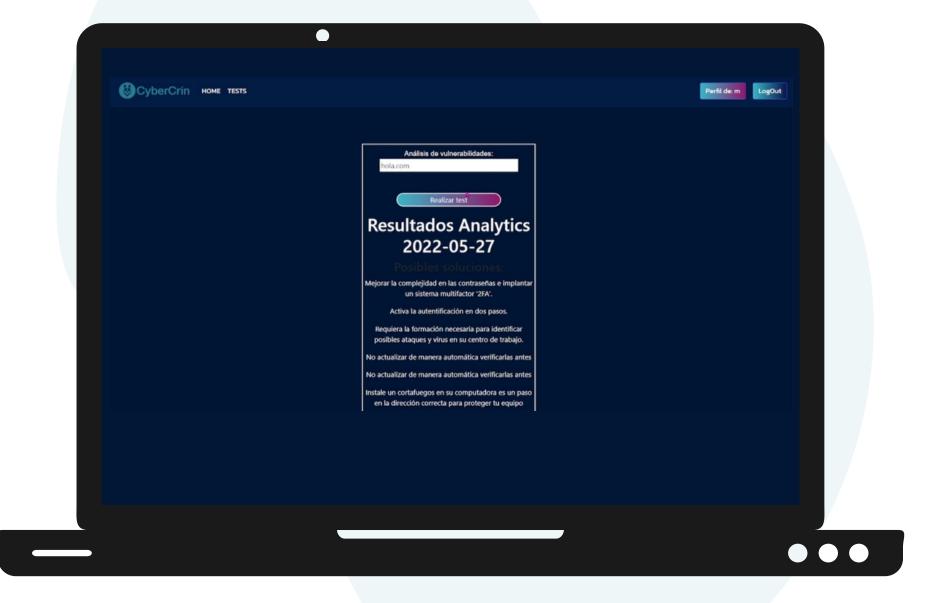

Compliance

For the normative compliance module, you will answer a series of questions according to the normative of LOPDGDD, ISO 27001, NIS 1.0 simple and intuitive that will allow to know the level of compliance.

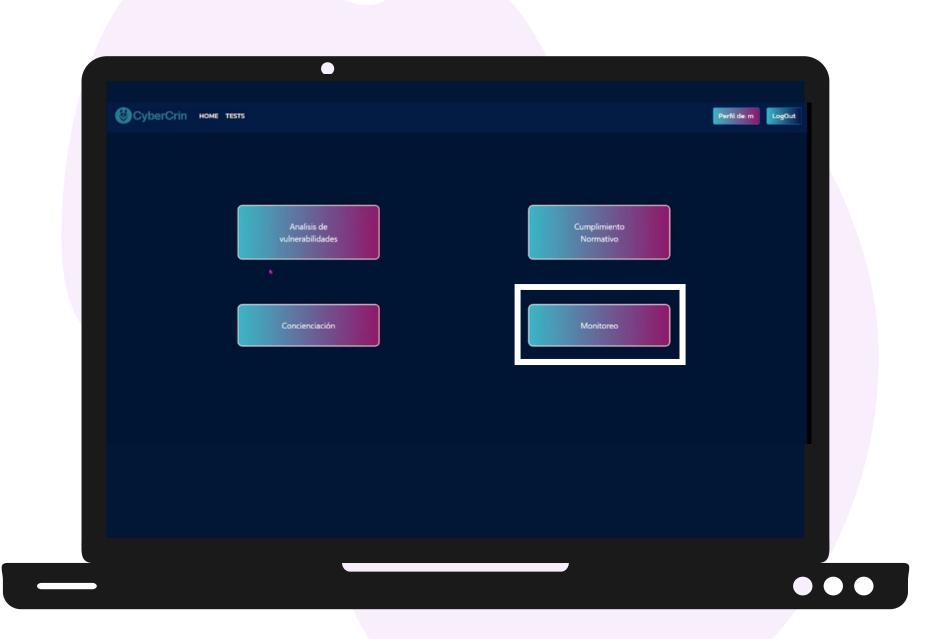

Pentesting

After that, our software will realize a pentesting by analyzing the IP of the company, in order to find the security weaknesses.

Simulation of Phishing

Finally, we know that human mistake is one of the main causes that facilitate cyber threats, to identify the level of response and awareness of employees to such an event, we will simulate a phishing attack, with prior authorization from the company.

Real time monitoring

While in real time our agents monitor the system, alerting in case of possible threats.
