Use Adversary-Generated Threat Intelligence to Improve Threat Detection and Response

Published 22 August 2022 - ID G00764758 - 35 min read
By Analyst(s): Nahim Fazal

Initiatives: [Security Operations for Technical Professionals](#)

Generic threat intelligence provides limited value for security operation teams. Security and risk management technical professionals should use deception technology to deliver real-time, actionable intelligence that can lead to more-effective threat detection.

Overview

Key Findings

- Organizations continue to struggle with generic intelligence that has limited value in terms of its actionability, because it is not sufficiently specific. Rather, it is raw data about interesting objects that lacks context.
- Deception technology can be deployed outside the network perimeter, and not just within it to collect client-specific intelligence.
- Data collected by deception tools provides more clarity if it is mapped to a framework.
- Deception technology will need a high level of credibility if it is to be used to create
