## ABOUT THE EVENT

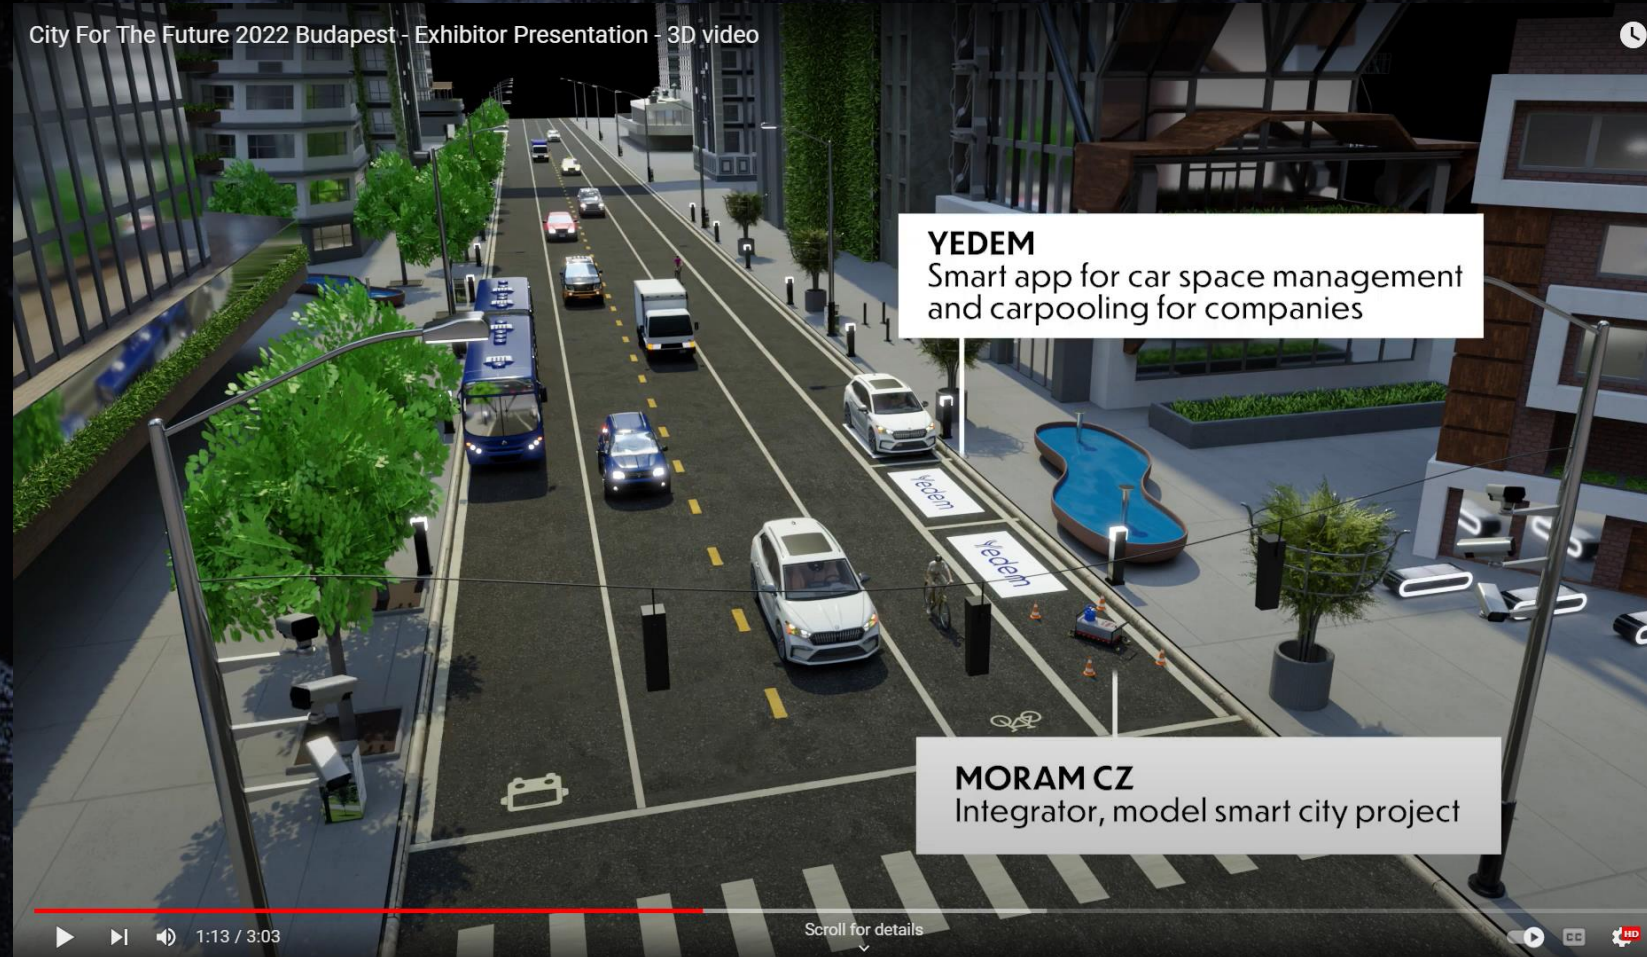

The Embassy of the Czech Republic in Budapest, CzechTrade office in Budapest, Bmo Regional Chamber of Commerce, the Chamber of Commerce and Industry of Hajdu-Bihar County, the Hungarian National Association of Local Authorities (FOOSZ) and the Obuda University joint forces to organize the City for the Future Budapest 2022 - Smart City Expo & B2B Business Forum.

New technologies have been and will be a key for the development of modern cities. Having this in mind, we have brought together leading Czech and Hungarian smart city companies to present their most promising innovations and solutions that could help to achieve our ultimate goal: to turn urban areas into places where people thrive, feel at home and desire to spend their lives.

During the City For The Future Budapest 2022: Smart City Expo with Business Forum participants could learn more about the current technology trends in the field of smart city and meet with innovative Czech and Hungarian smart city providers.

Why participate at events City For The Future?  
- As a company - find qualified Czech and Hungarian suppliers and business partners during effective one-to-one meetings  
- As a representative of a municipality - learn about new smart city solutions  
- As an R&D representative - learn about new technology trends

## CEE Expo & B2B Forum

For Sustainable and Smart Urban Development

Hosting TÖOSZ - Assembly of Delegates

HUNGEXPO, C Conference Center

24th May, 2023

### Targets:

 800+  
participants

 40+  
exhibitors

 300+  
municipality  
representatives

 2500 m2  
exhibition area

 Presentations and  
discussion panels

# Main topics

## **Efficient and sustainable use of natural resources**

Energy efficiency and savings opportunities

More efficient water management, water retention, desilting, wastewater treatment in small communities

## **Effective coordination of smart city ecosystem elements**

Technology as a means, not an end. Using technology and digitalisation to create a liveable future, in harmony with nature-friendly development.

## **Developing a sustainable urban management model**

Optimizing energy use in public buildings, integrated traffic, public lighting and security system management, etc.

## **Solutions and development plans tailored to the size, problems and needs of municipalities**

From basic to cutting edge: AI-based public security systems, satellite-based urban heat mapping, Data From Sky traffic management, infra-panel road defect repair machines etc.
